Description

The GESTRA Vaposcope is a sight flow indicator specially designed for monitoring flow conditions in pipelines. If installed **upstream** of steam traps the Vaposcope can be used for checking the traps for **steam loss** or for **banking-up of condensate**.

Function

Steam and condensate flow in a pipe in separate phases towards the steam trap. The regulator of a properly working steam trap is adjusted in such a way that only condensate but not steam is discharged. The condensate in the sightglass VK ... flows under the deflector which remains immersed, or at least touches the condensate surface. Due to this siphon effect condensate is continuously moved to the steam trap where it is evacuated. **Fig. 1**

Complete flooding of the Vaposcope VK \dots indicates banking-up of condensate. This may be done on purpose or because the steam trap is either undersized or failing to work correctly. **Fig. 2**

If the water level in the sightglass VK \dots is being considerably depressed during normal operation, it is a sure sign that the steam trap is passing live steam.

Function Fortsetzung

The regulator of the steam trap is probably failing or the cleaning valves are open. Fig. $\bf 3$

Design

VK 14

Straight-through type body with sightglasses made from borosilicate glass to DIN 7080 for fluids \leq **pH 9** at either end. The equipment has no moving parts.

VK 16

Straight-through type body with sightglasses made from borosilicate glass to DIN 7080 for fluids \leq **pH 10** at either end. The equipment is fitted with a mica disk and has no moving parts.

End Connections

Installation

Upstream of the steam trap, with the deflector pointing downwards and in accordance with the direction indicated by the flow arrow. For installation in vertical and horizontal pipes.

When ordering please state:

Service pressure, service temperature, pH value of the fluid

The following test certificates can be issued on request, at extra cost:

in accordance with EN 10204/2.2 and 3.1B.

All inspection requirements have to be stated with the order. After supply of the equipment certificates can no longer be established. Charges and extent of the above mentioned certificates as well as the different tests confirmed therein are listed in our price list "Test and Inspection Charges for Standard Equipment".

For other tests and inspections than those listed above, please consult us.

PED (Pressure Equipment Directive)

The equipment complies with the requirements of the Pressure Equipment Directive PED 97/23/EC. Applicable with fluids of group 2. With CE marking (apart from equipment excluded from the scope of the Directive according to section 3.3).

ATEX (Atmosphère Explosible)

The equipment does not have its own potential source of ignition and is therefore excluded from the scope of the ATEX Directive 94/9/EC. Applicable in Ex zones 0, 1, 2, 20, 21 and 22 (1999/92/EC). Without Ex marking.

Supply in accordance with our general terms of business.
